Summary

Frontend Developer focused on building responsive, accessible web interfaces with React, TypeScript and JavaScript. Built and deployed three projects from scratch, including a Firebase job application tracker with authentication and a resume builder with PDF export. Seeking a junior Frontend or React Developer role.

Projects

Portfolio *React, TypeScript, CSS, Vite, Vitest*

- Designed in Figma and built a mobile-first site with design tokens, Flexbox and Grid, and an accessible “Open to work” menu.
- Modelled profile, project and skill data with TypeScript interfaces, and rendered each section from typed data.
- Added an active nav link on scroll and unit tests (Vitest) for the contact-link logic.

GitHub Live Link

ApplyTrack *React, JavaScript, Firebase, Cloud Firestore, React Router, CSS, Vite*

- Built a job application tracker with authentication, protected routes and full CRUD, with status filtering, live search and dashboard statistics.
- Made modals accessible with the inert attribute, Escape-to-close and ARIA labelling.
- Handled loading, empty, error and offline states, with a retry option for failed requests.

GitHub Live Link

Resume Builder *React, JavaScript, CSS, Vite, React PDF Renderer, React Responsive*

- Built a multi-step resume builder with section-level validation, a live preview and PDF export.
- Added skippable optional sections whose state-driven validation hides them from both the preview and the PDF.
- Formatted bullet points with regex-based sentence splitting, and built separate mobile and desktop layouts with reusable components and custom hooks.
